The guideline on dementia is the first of its kind to fully integrate the health and social aspects of care for people with dementia into a single volume. It has been jointly developed by NICE (the National Institute for Health and Clinical Excellence) and SCIE (the Social Care Institute for Excellence). There are an estimated 700,000 people with dementia in the UK and approximately 1 million people caring for them. The guideline sets out clear recommendations, based on the best available evidence, for health and social care staff on how to work with people with dementia and their carers to significantly improve their treatment and care. This publication brings together all of the evidence that led to the recommendations in the guideline. It provides an overview of the condition and covers detection, diagnosis and assessment, and the full range of treatment and care approaches for people with dementia including promoting independence, psychological and psychosocial interventions, pharmacological treatments and palliative care. Importantly, it also addresses support and interventions for carers of people with dementia.
