The Best American Science Fiction and Fantasy 2015 by John ...

This unique system has made the Best American series the most respected—and most popular—of its kind. The Best American Science and Nature Writing 2011 includes. Atul Gawande, Jonathan Franzen, Deborah Blum, Malcolm Gladwell, Oliver Sacks, Jon Mooallem, Jon Cohen, Luke Dittrich, and others.

A collection of the best science and nature writing published in North America in 2019, guest edited by New York Times best-selling author and ground-breaking physicist Dr. Michio Kaku. Dr. Michio Kaku, one of the most influential living scientists and a New York Times best-selling author, selects the year's top science and nature writing from writers who balance research with humanity and, in the process, uncover riveting stories of discovery across the disciplines.

New York Times best-selling author and renowned science journalist Ed Yong compiles the best science and nature writing published in 2020. "The stories I have chosen reflect where I feel the field of science and nature writing has landed, and where it could go," Ed Yong writes in his introduction. "They are often full of tragedy, sometimes laced with wonder, but always deeply aware that science does not exist in a social vacuum. They are beautiful, whether in their clarity of ideas, the elegance of their prose,

or often both." The essays in this year's Best American Science and Nature Writing brought clarity to the complexity and bewilderment of 2020 and delivered us necessary information during a global pandemic. From an in-depth look at the moment of the virus's outbreak, to a harrowing personal account of lingering Covid symptoms, to a thoughtful analysis on how the pandemic will impact the environment, these essays, as Yong says, "synthesize, evaluate, dig, unveil, and challenge," imbuing a pivotal moment in history with lucidity and elegance. THE BEST AMERICAN SCIENCE AND NATURE WRITING 2021 INCLUDES • SUSAN ORLEAN • EMILY RABOTEAU • ZEYNEP TUFEKCI • HELEN OUYANG • HEATHER HOGAN BROOKE JARVIS • SARAH ZHANG and others

"Undeniably exquisite . . . Reveal[s] not only how science actually happens but also who or what propels its immutable humanity." —Maria Popova "An excellent introduction to the key issues in science today." —P. D. Smith, Guardian "[A] stellar compendium . . . Delightful to read." —Publishers Weekly, starred review A renowned scientist and the best-selling author of *Lab Girl*, Hope Jahren selects the year's top science and nature writing from writers who balance research with humanity and in the process uncover riveting stories of discovery across disciplines.

A NATIONAL BESTSELLER Sy Montgomery, New York Times best-selling author and recipient of numerous awards, edits this year's volume of the finest science and nature writing. "Science is important because this is how we seek to discover the truth about the world. And this is what makes excellent science and nature writing essential," observes New York Times best-selling author Sy Montgomery. "Science and nature writing are how we share the truth about the universe with the people of the world." And collected here are truths about nearly every corner of the universe. From meditations on extinction, to the search for alien life, to the prejudice that infects our medical system, the pieces in this year's Best American Science and Nature Writing seek to bring to the people stories of some of the most pressing issues facing our planet, as well as moments of wonder reflecting the immense beauty our natural world offers.

Best-selling author Sam Kean edits this year's volume of the finest science and nature writing.

This anthology of essays and articles explores topics ranging from untouched wilderness to scientific ethics—and the nature of curiosity itself. Scientists and writers are both driven by a dogged curiosity, immersing themselves in detailed observations that, over time, uncover larger stories. As Rebecca Skloot says in her introduction, all the stories in this collection are "written by and about people who take the time, and often a substantial amount of risk, to follow curiosity where it may lead, so we can all learn about it." The Best American Science and Nature Writing 2015 includes work from both award-winning writers and up-and-coming voices in the field. From Brooke Jarvis on deep-ocean mining to Elizabeth Kolbert on New Zealand's unconventional conservation strategies, this is a group that celebrates the growing diversity in science and nature writing alike. Altogether, the writers honored in this volume challenge us to consider the strains facing our planet and its many species, while never losing sight of the wonders we're working to preserve for generations to come. This anthology includes essays and articles by Sheri Fink, Atul Gawande, Leslie Jamison, Sam Kean, Seth Mnookin, Matthew Power, Michael Specter and others.

If, as Matt Ridley suggests, science is simply the search for new forms of ignorance, then perhaps it follows that with science's advances come new questions. Will human genetic engineering become commonplace? Will human cloning ever be safe? Are there many universes? How much will the climate change during the coming century? The Best American Science Writing 2002 gathers top writers and scientists covering the latest developments in the fastest-changing, farthest-reaching scientific fields, such as medicine, genetics, computer technology, evolutionary psychology, cutting-edge physics, and the environment. Among this year's selections: In "The Made-to-Order Savior," Lisa Belkin spotlights two desperate families seeking an unprecedented cure by a medically and ethically unprecedented means -- creating a genetically matched child. Margaret Talbot's "A Desire to Duplicate" reveals that the first human clone may very likely come from an entirely unexpected source, and sooner than we think. Michael Specter reports on the shock waves rippling through the field of neuroscience following the revolutionary discovery that adult brain cells might in fact regenerate ("Rethinking the Brain"). Christopher Dickey's "I Love My Glow Bunny" recounts with sly humor a peculiar episode in which genetic engineering and artistic culture collide. Natalie Angier draws an insightful contrast between suicide terrorists and rescue workers who risk their lives, and finds that sympathy and altruism have a definite place in the evolution of human nature, David Berlinski's "What Brings a World into Being?" ponders the idea of biology and physics as essentially digital technologies, exploring the mysteries encoded in the universe's smallest units, be they cells or quanta. Nicholas Wade shows how one of the most controversial books of the year, *The Skeptical Environmentalist*, by former Greenpeace member and self-described leftist Bjorn Lomborg, debunks some of the most cherished tenets of the environmental movement, suggesting that things are perhaps not as bad as we've been led to believe. And as a counterpoint, Darcy Frey's profile of George Divoky reveals a dedicated researcher whose love of birds and mystery leads to some sobering discoveries about global warming and forcefully reminds us of the unsung heroes of science: those who put in long hours, fill in small details, and take great trouble. In the end, the unanswered questions are what sustain scientific inquiry, open new frontiers of knowledge, and lead to new technologies and medical treatments. The Best American Science Writing 2002 is a series of exciting reports from science's front lines, where what we don't know is every bit as important as what we know.

The best science fiction and fantasy stories from 2019, guest-edited by author of the mega-best-selling

Outlander series, Diana Gabaldon. Today's readers of science fiction and fantasy have an appetite for stories that address a wide variety of voices, perspectives, and styles. There is an openness to experiment and pushing boundaries, combined with the classic desire to read about spaceships and dragons, future technology and ancient magic, and the places where they intersect. Contemporary science fiction and fantasy looks to accomplish the same goal as ever—to illuminate what it means to be human. With a diverse selection of stories chosen by series editor John Joseph Adams and Diana Gabaldon, *The Best American Science Fiction and Fantasy 2020* explores the ever-expanding and changing world of SFF today.

"A stimulating compendium" on topics from antibiotics to animals, featuring Rebecca Solnit, E.O. Wilson, Nicholas Carr, Elizabeth Kolbert, and many more (Kirkus Reviews). "A consistently strong series . . . Making connections between seemingly unrelated topics can help expand thinking, as seen in the effects of automated navigation on both airplane pilot error and Inuit hunting accidents that Nicholas Carr explores in 'The Great Forgetting.' Sarah Stewart Johnson makes a similar connection between the loss of a 1912 Antarctic expedition and the explosion of the space shuttle Challenger in 'O-Rings.' . . . Essays like Virginia Hughes's '23 and You' investigates the effects of availability of individual genetic information on human interactions, while pieces like Maryn McKenna's 'Imagining the Post-Antibiotics Future' and Kate Sheppard's 'Under Water' remind us of unpleasant futures which we have in large part created ourselves. But Barbara Kingsolver's 'Where it Begins,' a lyrical musing on connectedness, or Wilson's optimistic, bug-loving 'The Rebirth of Gorongosa,' reveal that among the strange, shocking, or depressing, there is still unadulterated joy to be found." —Publishers Weekly "Undeniably exquisite . . . meditations that reveal not only how science actually happens but also who or what propels its immutable humanity." —Maria Popova, *Brain Pickings* Contributors include: Katherine Bagley • Nicholas Carr • David Dobbs • Pippa Goldschmidt • Amy Harmon • Robin Marantz Henig • Virginia Hughes • Ferris Jabr • Sarah Stewart Johnson • Barbara J. King • Barbara Kingsolver • Maggie Koerth-Baker • Elizabeth Kolbert • Joshua Lang • Maryn McKenna • Seth Mnookin • Justin Nobel • Fred Pearce • Corey S. Powell • Roy Scranton • Kate Sheppard • Bill Sherwonit • Rebecca Solnit • David Treuer • E.O. Wilson • Carl Zimmer

This anthology collects some of the year's best science and nature writing—from climate change to killer beetles, an exposé of nail salons, and more. As guest editor Amy Stewart says in her introduction, "science writers get into the game with all kinds of noble, high-minded ambitions. We want to educate. To enlighten...But at the end of the day, we're all writers. We're just like novelists, memoirists, and poets. We're entertainers." The writers in this anthology pull off that wonderful feat of turning hard research into page-turning narrative. From a Pulitzer Prize-winning essay on the earthquake that could decimate the Pacific Northwest to the astonishing work of investigative journalism that transformed the nail salon industry, this is a collection of hard-hitting and beautifully composed writing on the wonders, dangers, and oddities of scientific innovation and our natural world. *The Best American Science and Nature Writing 2016* includes Kathryn Schulz, Sarah Maslin Nir, Charles C. Mann, Oliver Sacks, Elizabeth Kolbert, Gretel Ehrlich, and others.
